NEW REPAIR KIT FOR PVC GLUE JOINTS

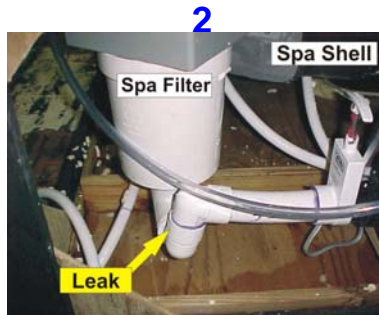

PRODUCT AFFECTED: Any Pool or Spa.

DESCRIPTION: A Remarkable adhesive designed for high strength bond to plastics, metals and other composites. This product can be used to quickly patch or repair any possible **GLUE JOINT** leak anywhere in the plumbing. (Flexible or rigid PVC pipe) **Do Not use for repairing a silicone leak!**

Again, this kit will eliminate the need of having to order and wait for special fittings, also having to cut and re-plum additional fittings. This will be a huge time and money saver for everyone! See below:

Leak reported =
Service Call

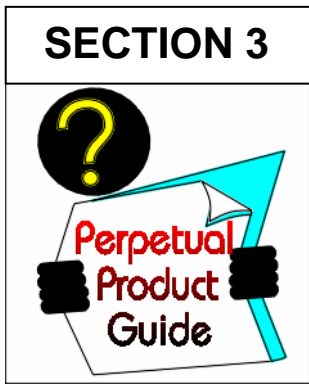

Having to replace entire filter
canister and all the fittings that
are glued together =
Big headache!

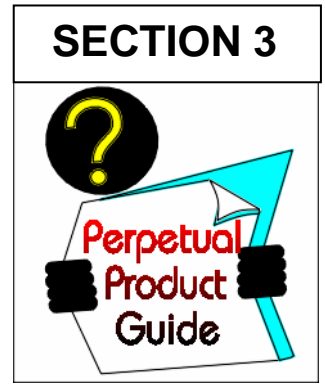

Patching it instead =
Priceless!!!!
